

## MARICAST® Polyurethane Casting Resins

### MARIS POLYMERS® Polyurethane Casting Resins

MARIS POLYMERS® offers specialized polyurethane resins for the production of various objects under the trade name MARICAST®.

The MARICAST® casting offer a complete range of solutions for the industry as they range from rigid to hard elastic, have low to high viscosity. The MARICAST® casting resins range can be applied either by robotic machines or by hand, depending on the object production method used.

**MARICAST® casting resins are used for the production of:**

- ✓ Decorative Objects
- ✓ Industrial Parts
- ✓ Window Mannequins
- ✓ Photo frames
- ✓ Silverplate statues
- ✓ Prototyping
- ✓ Special Effects
- ✓ Polystyrene Covering, etc.

Casting Resin	Components	Uses
MARICAST® 4005	2K	Rigid casting resin for the production of small hollow rotation-casted objects. Quick setting. Low viscosity. Solvent free
MARICAST® 4051	2K	Semi-Rigid casting resin for use on prototyping, production of silverplated photo frames, silverplated icons and various massive-body objects. Medium viscosity. Solvent free
MARICAST® 4061	2K	Rigid casting resin for use of window mannequin and various low weight object production. Low viscosity. Solvent free
MARICAST® 4062	2K	Extra strength, rigid casting resin for use of window mannequin and various low weight object production. Low viscosity. Solvent free
MARICAST® 4645	2K	Elastic casting resin for production of molds and elastic objects. Low viscosity. Solvent free
MARICAST® 4665	2K	Hard-elastic casting resin for production of molds and elastic objects. Low viscosity. Solvent free
